## DETAILED ACTION

### *Remarks*

Two claims are numbered claim 31. For the purposes of clarity in this action, the claims discussed after this section will be named thus: The second claim 31 is incremented by one, as are claims 32-45. Further, the dependencies of claims 42-45 are incremented by one. For example, the second claim 31 will be named claim 32 depending from claim 31, and claim 43 will be named claim 44 depending from 43.

### *Election/Restrictions*

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group A, claims 1-9, is drawn to a method classified in class 250, subclass 559.32.

Group B, claims 10-13, is drawn to a method classified in class 356, subclass 28.

Group C, claims 14-17, 43, and 44, is drawn to a method classified in class 356, subclass 498.

Group D, claims 18-30, is drawn to a sensor classified in class 356, subclass 482.

Group E, claims 31-42 and 46, is drawn to a semiconductor detector classified in class 257, subclass 184.

Group F, claim 45, is drawn to a method to measure angle classified in class 356, subclass 510.

The inventions listed as Groups A-F do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The applicant fails to expressly point out the special technical features in each of the groups, which are novel. General to each group is, "driving current through two or more active areas of a detector while incident radiation illuminates the active areas; and sensing voltage across the active areas," or the structure to drive current through the active areas and to detect voltage across the active areas. It is well known to drive a current across active regions and measure the voltage, which is proportional to the incident radiation on the active regions. For example, see Anderson (US 3,942,898).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of

record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
